When Comparing Windows...

Look for the NFRC Label:

NFRC ratings are an accurate, unbiased way to compare energy efficiency.

Compare U-Factor: A lower U-Factor means you'll stay warmer in the winter and spend less heating your home.

Compare SHGC: The lower the better. A lower SHGC will keep your house cooler in the summer.

Look for the AAMA Label:

The AAMA program certifies that labeled windows have been tested, certified and accredited to AAMA performance specifications for :

- **Design Pressure (DP):** Resistance to wind and other pressures. The highter the Better.
- **Water Leakage:** None Allowed.
- **Forced Entry Resistance**
